RESEARCH PROFILE

3D vision researcher at NAVER LABS specializing in large-scale reconstruction, neural rendering, and generative 3D. Contributions span NAVER Map Street View 3D, Flying View 3D, city-scale digital twins, and media/VFX. Current research aims to enable visual simulation for robotics and autonomous driving through scene extension beyond captured trajectories and geometry-preserving appearance editing.

PROFESSIONAL EXPERIENCE

NAVER LABS

Feb 2022 - Present

Senior Research Scientist | Seongnam, South Korea

- **NAVER Map Street View 3D:** multi-view stereo depth reconstruction for multi-camera mapping rigs, RGB-D panoramic stitching, and mesh generation and simplification.
- **NAVER Map Flying View 3D:** dense matching and MVS preprocessing for aerial imagery, geometry-aware 3DGS reconstruction, city-scale tiled 3DGS training, and seamless LoD rendering.
- **Media & VFX:** dense 3D reconstruction and 3DGS training and rendering for real-world urban scenes.
- **City-scale digital twins:** MVS-based dense point-cloud and mesh reconstruction, with 3DGS-based scene reconstruction.
- **Current research:** extending scenes beyond captured trajectories for visual simulation in robotics and autonomous driving using 3D Gaussian Splatting, generative video/3D models, and feed-forward 3D reconstruction, with an emphasis on geometric and multi-view consistency. Parallel work explores geometry-preserving appearance editing.

Samsung Research

Jan 2021 - Jan 2022

Creative Leader, Team ReMo (Reconstruct Moments) | Seoul, South Korea

- Led an incubation team exploring AR/VR applications and business models for 3D content creation from smartphone photos.
- Prototyped photorealistic 3D-content experiences, including single-image animatable avatars and interactive 3D photos from smartphone image sequences.

Samsung Electronics

Mar 2018 - Dec 2020

Staff Engineer, Mobile Communications Division | Suwon, South Korea

- Developed core time-of-flight (ToF) AR measurement technologies for QuickMeasure, commercialized on the Galaxy S10 5G.
- Developed photo-filter style transfer for My Filters on the Galaxy S20 series; corresponding author of an ECCV 2020 Spotlight paper.
- Implemented the on-device Photo Remaster pipeline for degradation detection, automatic enhancement, and result recommendation, commercialized on the Galaxy S21 series.
- Explored multi-task learning for segmentation and depth estimation. Generated human-depth data using multi-view stereo and synthetic segmentation/depth data using Unreal Engine.

SELECTED PUBLIC WORK AT NAVER LABS

Company-published articles describing public systems and deployments to which I contributed.

[NAVER Map Flying View 3D - City-scale Novel View Synthesis](#)

Public overview of large-scale NVS using street-view and drone imagery, including multi-sensor 3D alignment, tiled city-scale training/rendering, and treatment of distant/background regions.

[NAVER Map Street View 3D - Large-scale 3D Reconstruction & Visualization](#)

Public overview of the production pipeline from mapping data and precise point clouds to 360 panoramas and depth-aware 3D meshes for seamless spatial navigation and information augmentation.

[Novel View Synthesis for Media & VFX](#)

Public example of real-world urban reconstruction and NVS used to synthesize new viewpoints for screen content, extending the technology beyond mapping.

DOCTORAL RESEARCH PROJECTS

KAIST

Mar 2010 - Feb 2018

Doctoral Research, Electrical Engineering | Daejeon, South Korea

Multi-view Image-based 3D Face Reconstruction

Tricubics Inc.

- Developed preprocessing for eye-blink detection, specular-region detection, and keyframe selection to improve reconstruction quality.
- Implemented visual SLAM and volumetric reconstruction for multi-view 3D face reconstruction.

3D Object and Texture Reconstruction based on Depth and Multi-view Video

National Research Foundation

- Built an RGB-D and turntable-based capture system for depth and multi-view images.
- Reconstructed object geometry using visual hulls refined by depth images, and applied view-dependent texture mapping for photorealistic rendering.

3D Hand Skeleton Estimation based on Proximity Sensor

Samsung Electronics

- Analyzed depth and proximity sensors; estimated 3D hand skeletons from extracted hand-depth data using a randomized decision forest.

3D Video Object Compression Method based on Intermediate Surface

National Research Foundation

- Proposed conversions between 3D video object formats, including voxels and meshes, and developed a compression framework based on the Intermediate Surface.

Layered Panoramic Imaging

Electronics and Telecommunications Research Institute

- Estimated multi-view depth maps and fused them into a panoramic depth map.
- Combined panoramic video with high-resolution regions of interest for interactive viewing.

Multi-object Segmentation and Tracking

Electronics and Telecommunications Research Institute

- Extracted human masks and tracked multiple people in video sequences in real time.

TECHNICAL EXPERTISE

Research: 3D reconstruction, multi-view stereo, RGB-D reconstruction, visual SLAM, neural rendering, novel-view synthesis, 3D Gaussian Splatting, generative video/3D models, feed-forward 3D reconstruction.

Vision & imaging: Image processing, depth estimation, segmentation, image enhancement, style transfer.

Programming & platforms: C/C++, CUDA, OpenGL, Three.js, Android.

EDUCATION

KAIST

Mar 2010 - Feb 2018

Ph.D. in Electrical Engineering | Daejeon, South Korea

Dissertation: A study on interactive 3D reconstruction using RGB-D camera

KAIST

Mar 2006 - Jan 2010

B.Eng. in Electrical Engineering | Daejeon, South Korea

Gyeonggi Science High School

Mar 2004 - Feb 2006

High School Diploma | Suwon, South Korea

PATENTS AND PATENT APPLICATIONS

Granted patents

Electronic device and object measurement method thereof

D. Oh, **J. Yoo**, B. Kim, C. Park, and K. Lee.

U.S. Patent 11,361,461 | 2022

Apparatus and method for creating panorama

M. S. Ki, **J. Yoo**, and S. D. Kim.

U.S. Patent 9,584,723 | 2017

Apparatus and method for generating and consuming three-dimensional (3D) data format to generate realistic panoramic image

M. S. Ki, Y. J. Cho, S. Y. Lim, J. H. Cha, S. K. Beack, Y. J. Lee, J. W. Kim, S. D. Kim, W. J. Kim, **J. Yoo**, and S. S. Hwang.

U.S. Patent 9,185,288 | 2015

Patent applications

Electronic apparatus and method for controlling thereof

J. Yoo, Y. Park, D. Kim, B. Moon, and Y. Lee.

U.S. Patent Application US18/208,976 | 2023

Method for generating image and electronic device therefor

J. Choe, J. Yim, B. Kim, W. Do, **J. Yoo**, K. Lim, and D. Shin.

U.S. Patent Application 17/798,842 | 2023

Method and an electronic device for detecting and removing artifacts/degradations in media

B. Kim, B. Singh, A. S. Shukla, **J. Yoo**, N. G. Pai, P. S. Nair, R. N. Gadde, S. Choi, and S. K. Pasupuleti.

U.S. Patent Application 17/550,751 | 2022

NAVER LABS patent applications (pending publication)

Three Korean patent applications filed at NAVER LABS (2025-present; two on Street View 3D, one on Flying View 3D), pending publication.

TEACHING EXPERIENCE

Teaching Assistant, KAIST | 2011 - 2012

Multiple View Geometry for Computer Vision; Matrix Computation.

AWARDS AND HONORS

Samsung Ph.D. Scholarship | Samsung Electronics | Mar 2013 - Feb 2017

Silver Prize, Korean Physics Olympiad (KPhO) | 2005
